

If Safety Centre

— AN LOSS PREVENTION COURSE AND COMPETENCE CENTRE

This is a presentation of If Safety Centre which discusses how we can help your company by providing courses and skills building initiatives for fire safety, gas safety, first aid and water damage, among other things.

UNIQUE COURSES

If is the only insurance company in Northern Europe able to offer loss prevention courses at its own safety centre. The centre was founded in 1989, and its purpose was to create a leading environment for fire protection and loss prevention work in Scandinavia. Now this objective has become reality.

The centre's experienced instructors use a combination of theory and practical exercises to give participants a knowledge of how to avoid claims in the workplace. And these courses also include plenty of experience to help you remember the knowledge you are being given.

We use motivation, knowledge and training to help enhance safety as part of your everyday work.

The centre is based in Ringvoll in the municipality of Hobøl, some 50 km south of Oslo. Besides modern conference facilities, you will find fantastic indoor and outdoor areas for practical exercises.

OUR OBJECTIVE

Better fire safety for our customers – and they should know the reason.

WHEN THE LIGHT AT THE END OF THE TUNNEL... IS A FIRE

The Safety Centre has a full-scale tunnel, 100 metres long. This tunnel is the only one in Europe built solely to train tunnel users and emergency personnel. It is also used for testing safety installations.

A FEW METRES AWAY FROM THE FLAMES

In our fire theatre, we carry out realistic demonstrations of various kinds of fire. You get to sit safely in the auditorium behind a safe glass wall and watch how the fire develops. You end up so close to the fire that you can feel its heat and are almost standing right in the middle of it.

FIREFIGHTER FOR A DAY

Course participants are able to put their theoretical knowledge to the test at the Safety Centre's outdoor area, and can practise putting out a number of different types of fire: car fires, transformer fires, gas fires. You will also receive training on management at the scene of an incident, first aid and how to behave in the event of a fire or road traffic accident, for example.

The plenary room has all facilities and can accommodate 58 course participants. We are able to serve lunch and dinner.

A MEETING PLACE FOR PREVENTION

With its meeting rooms, auditoriums and large outdoor areas, If Safety Centre is the ideal place for meetings, seminars and industry symposia. Everything is arranged here to allow participants to try out their technical knowledge in a safe, realistic environment. You can follow your own agenda or combine your own agency with useful loss prevention work.

SET THE RIGHT COURSE FOR YOUR COMPANY

Holding courses and exercises at the Safety Centre will encourage motivation in your staff, help them to play an active part in your company's loss prevention work and teach them how to put out a fire before it has disastrous consequences. Our courses cover everything; from a general knowledge of fire extinguishing and first aid to custom courses targeted at specific groups.
